

Alliance for Educational Equity Discipline Breakout

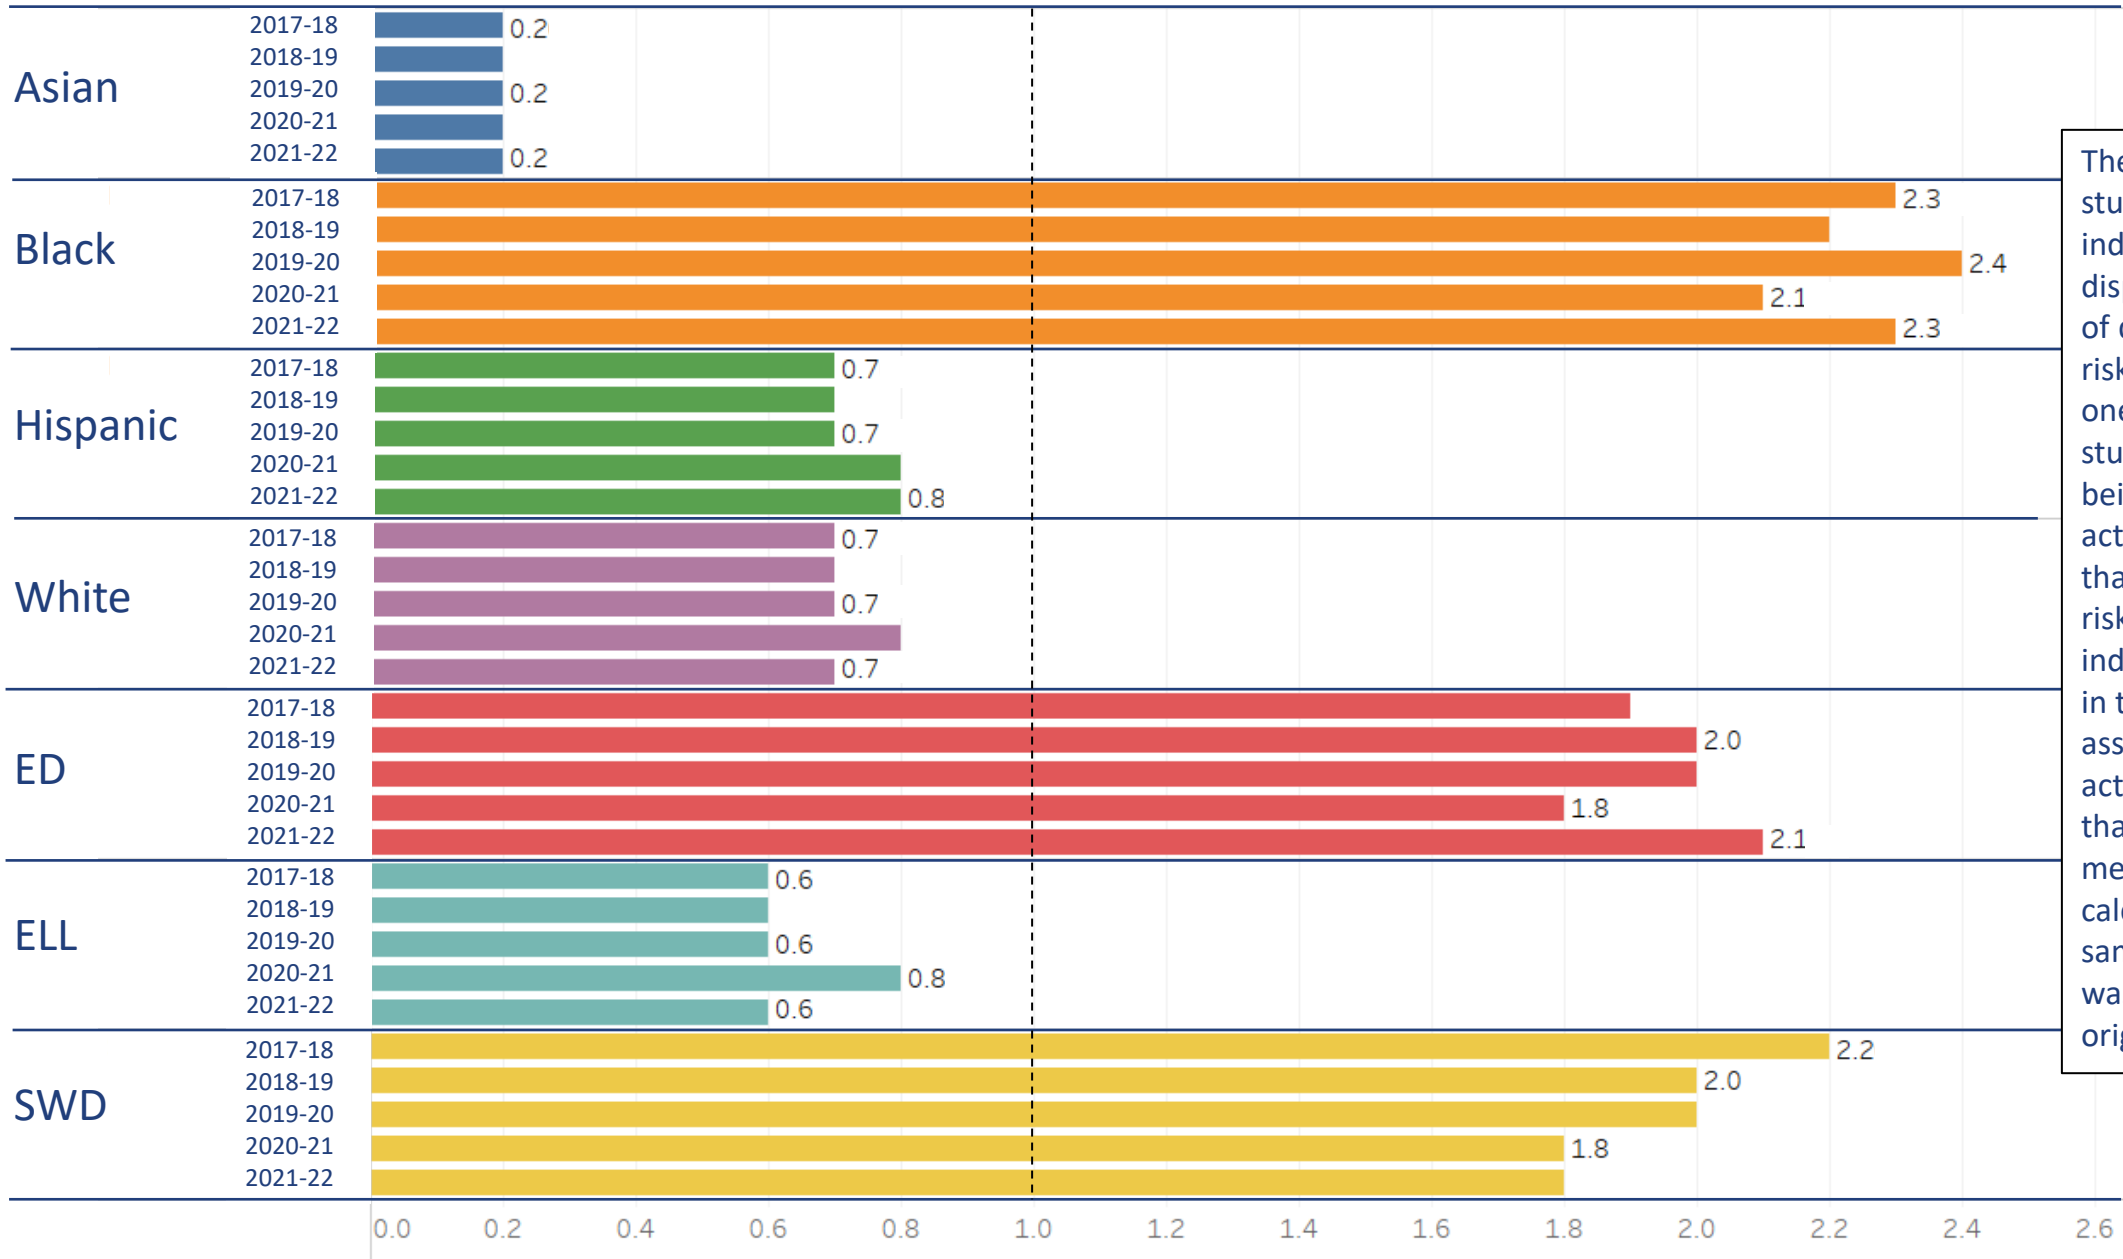

April 26, 2022

*Includes Data Through 1/1/2022

Out of School Suspensions (OSS)

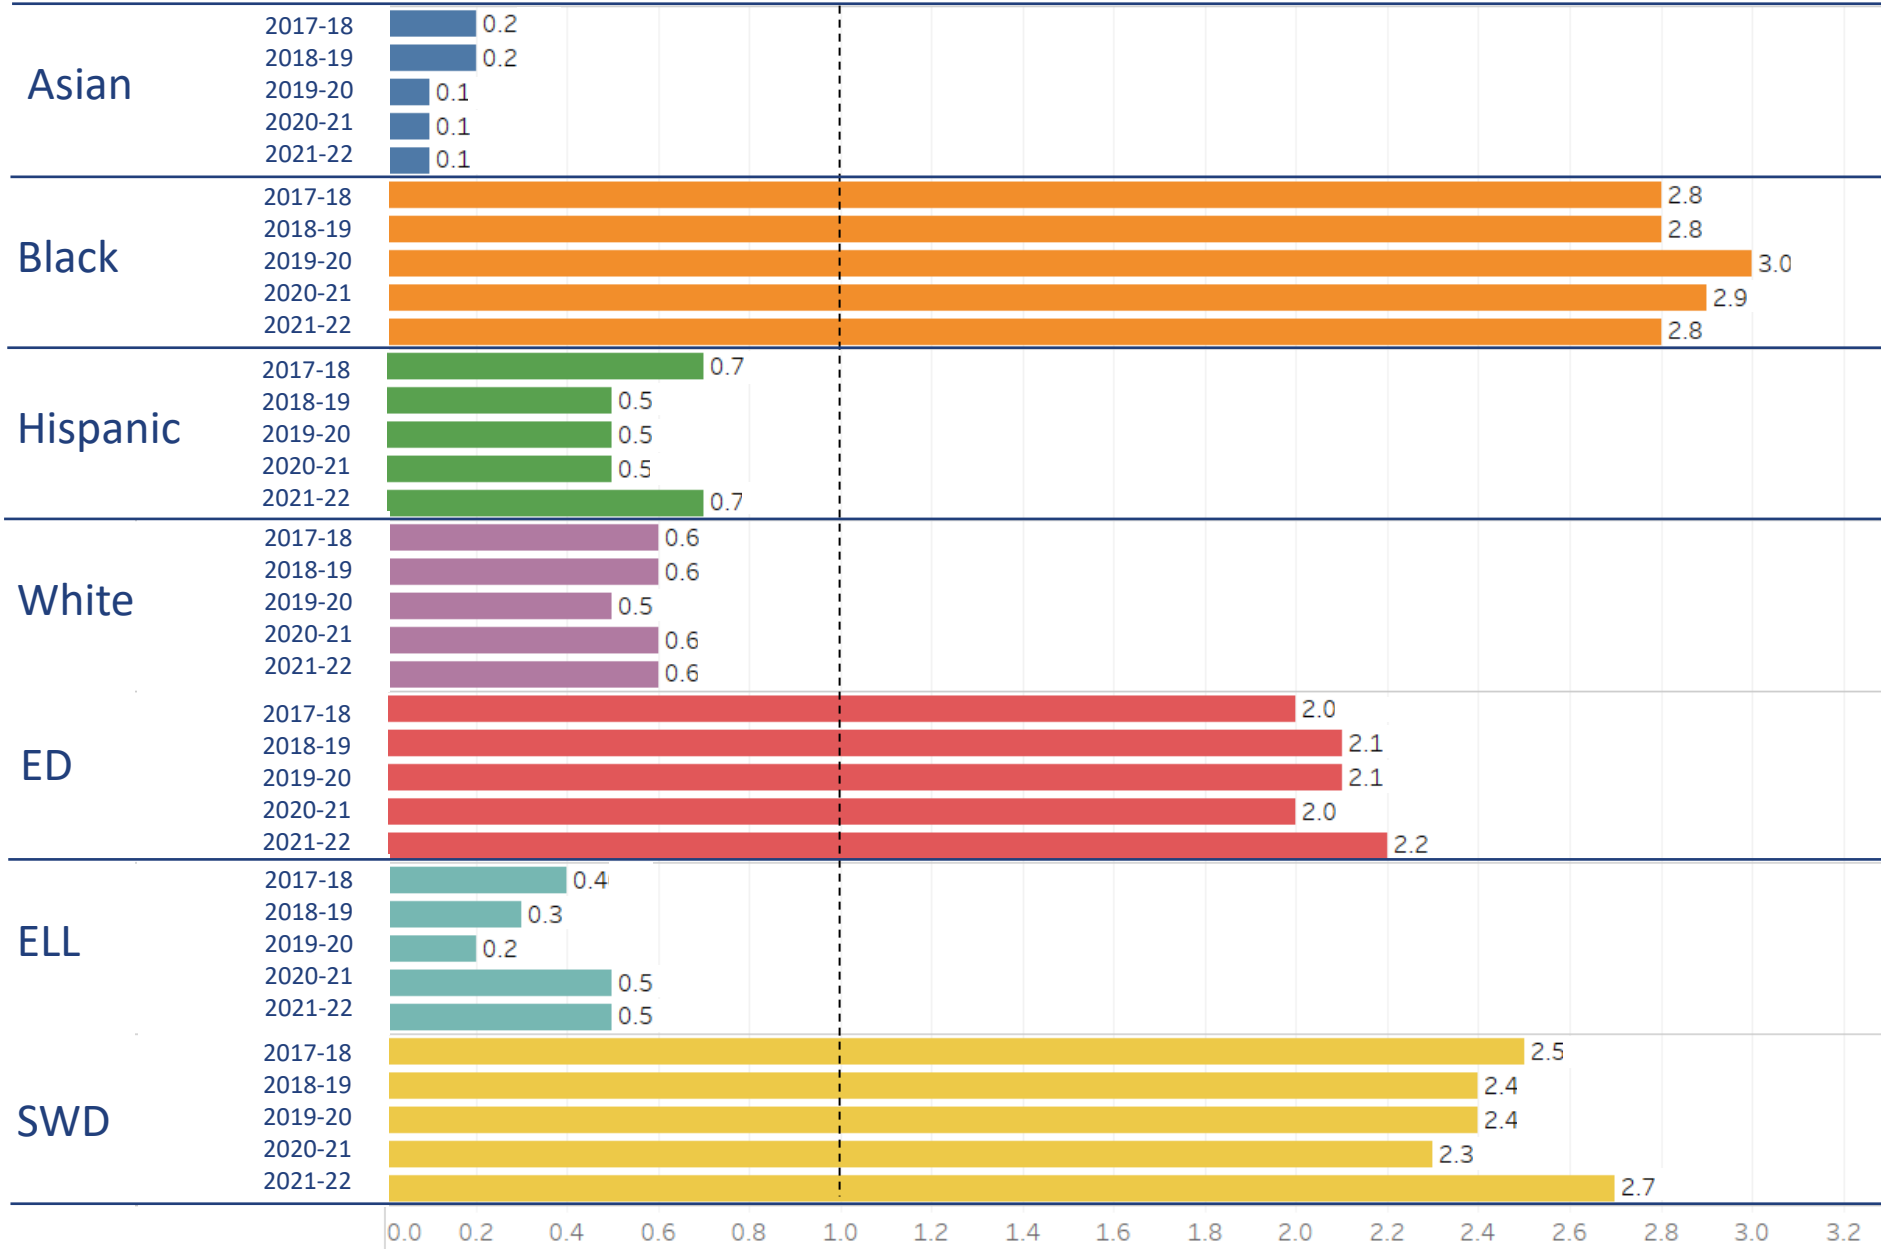

Overall OSS Risk Ratio / All Grades

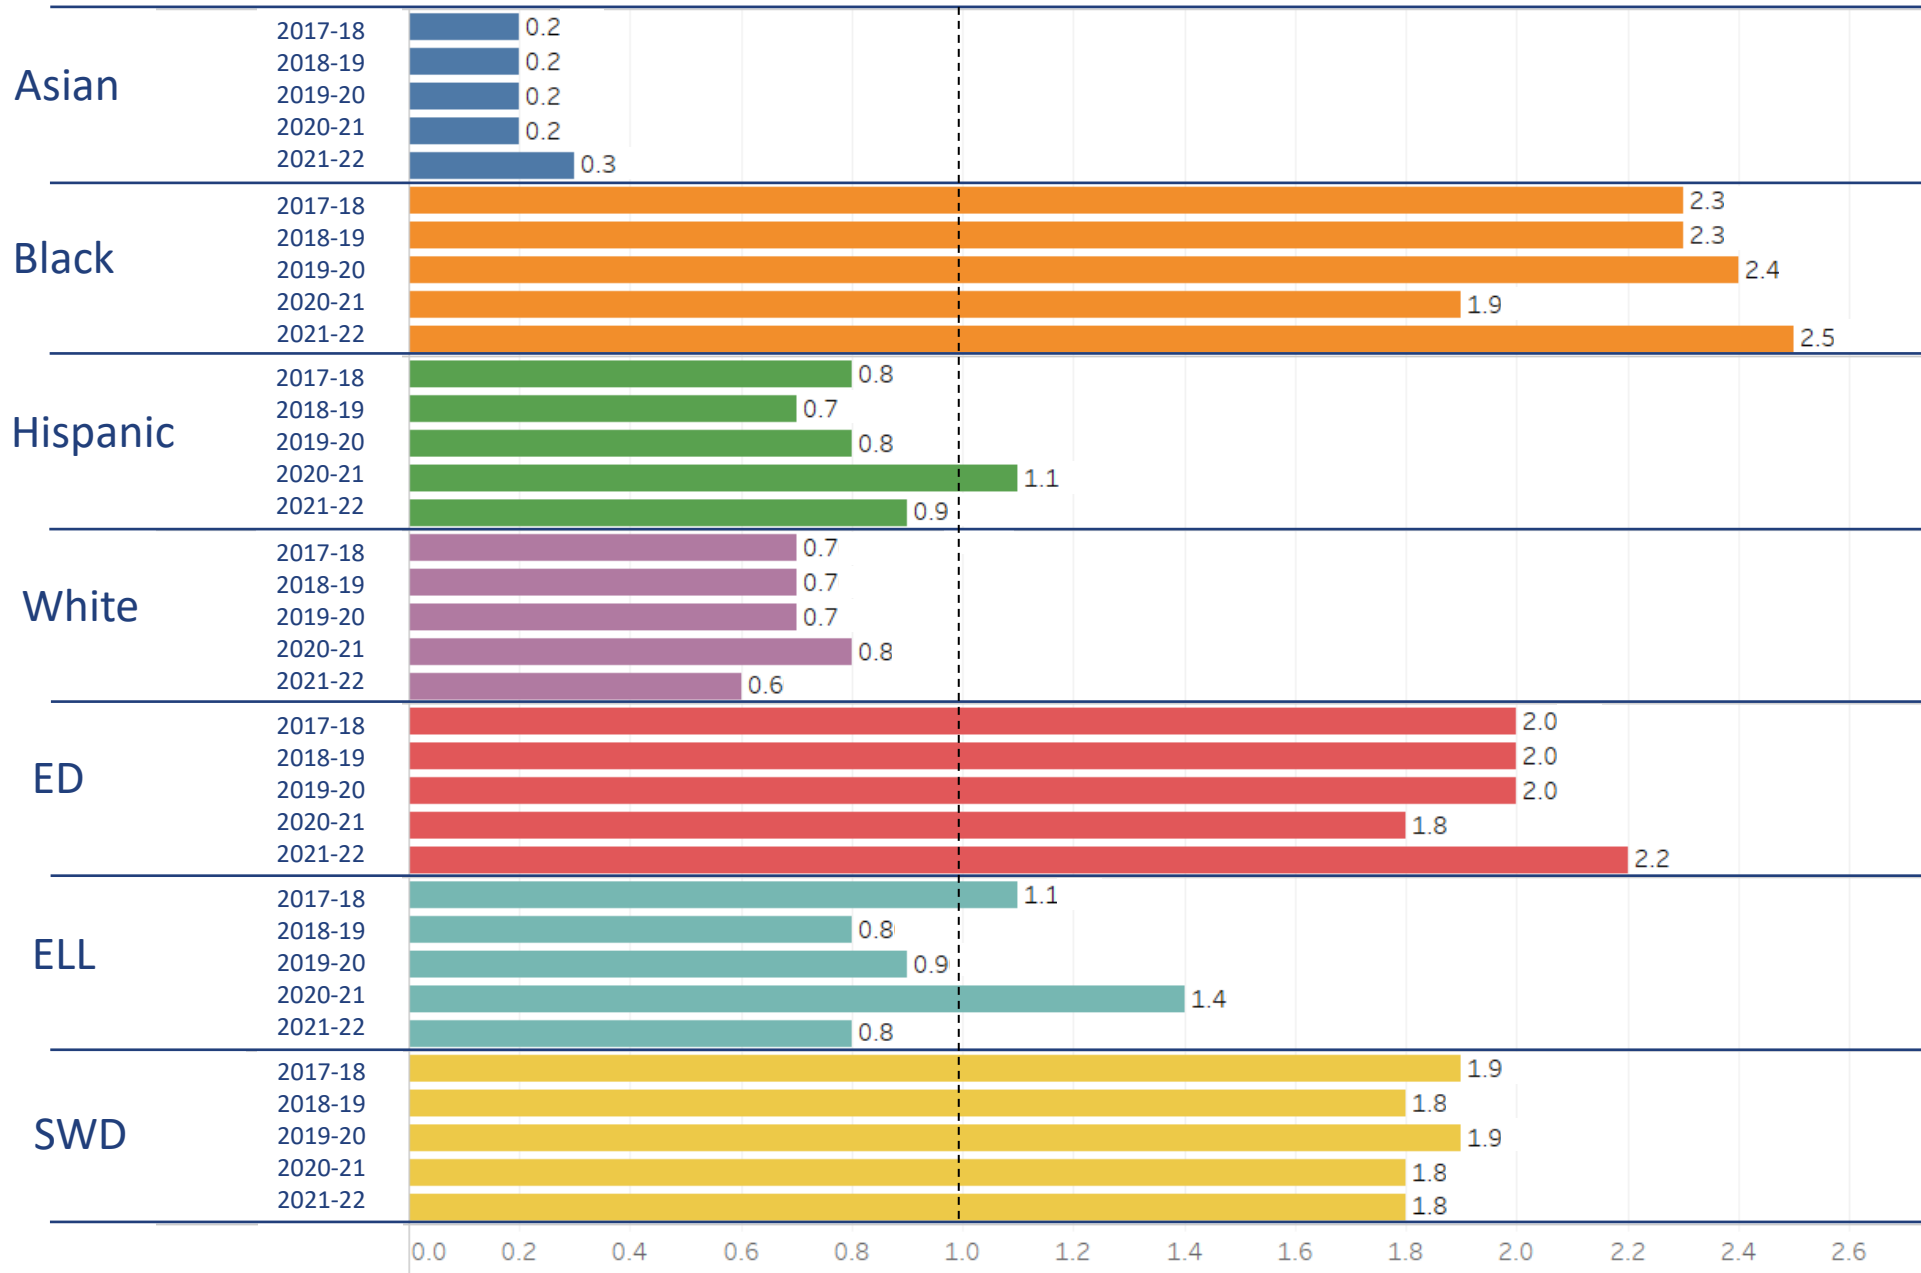

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

OSS Risk Ratio / Elementary

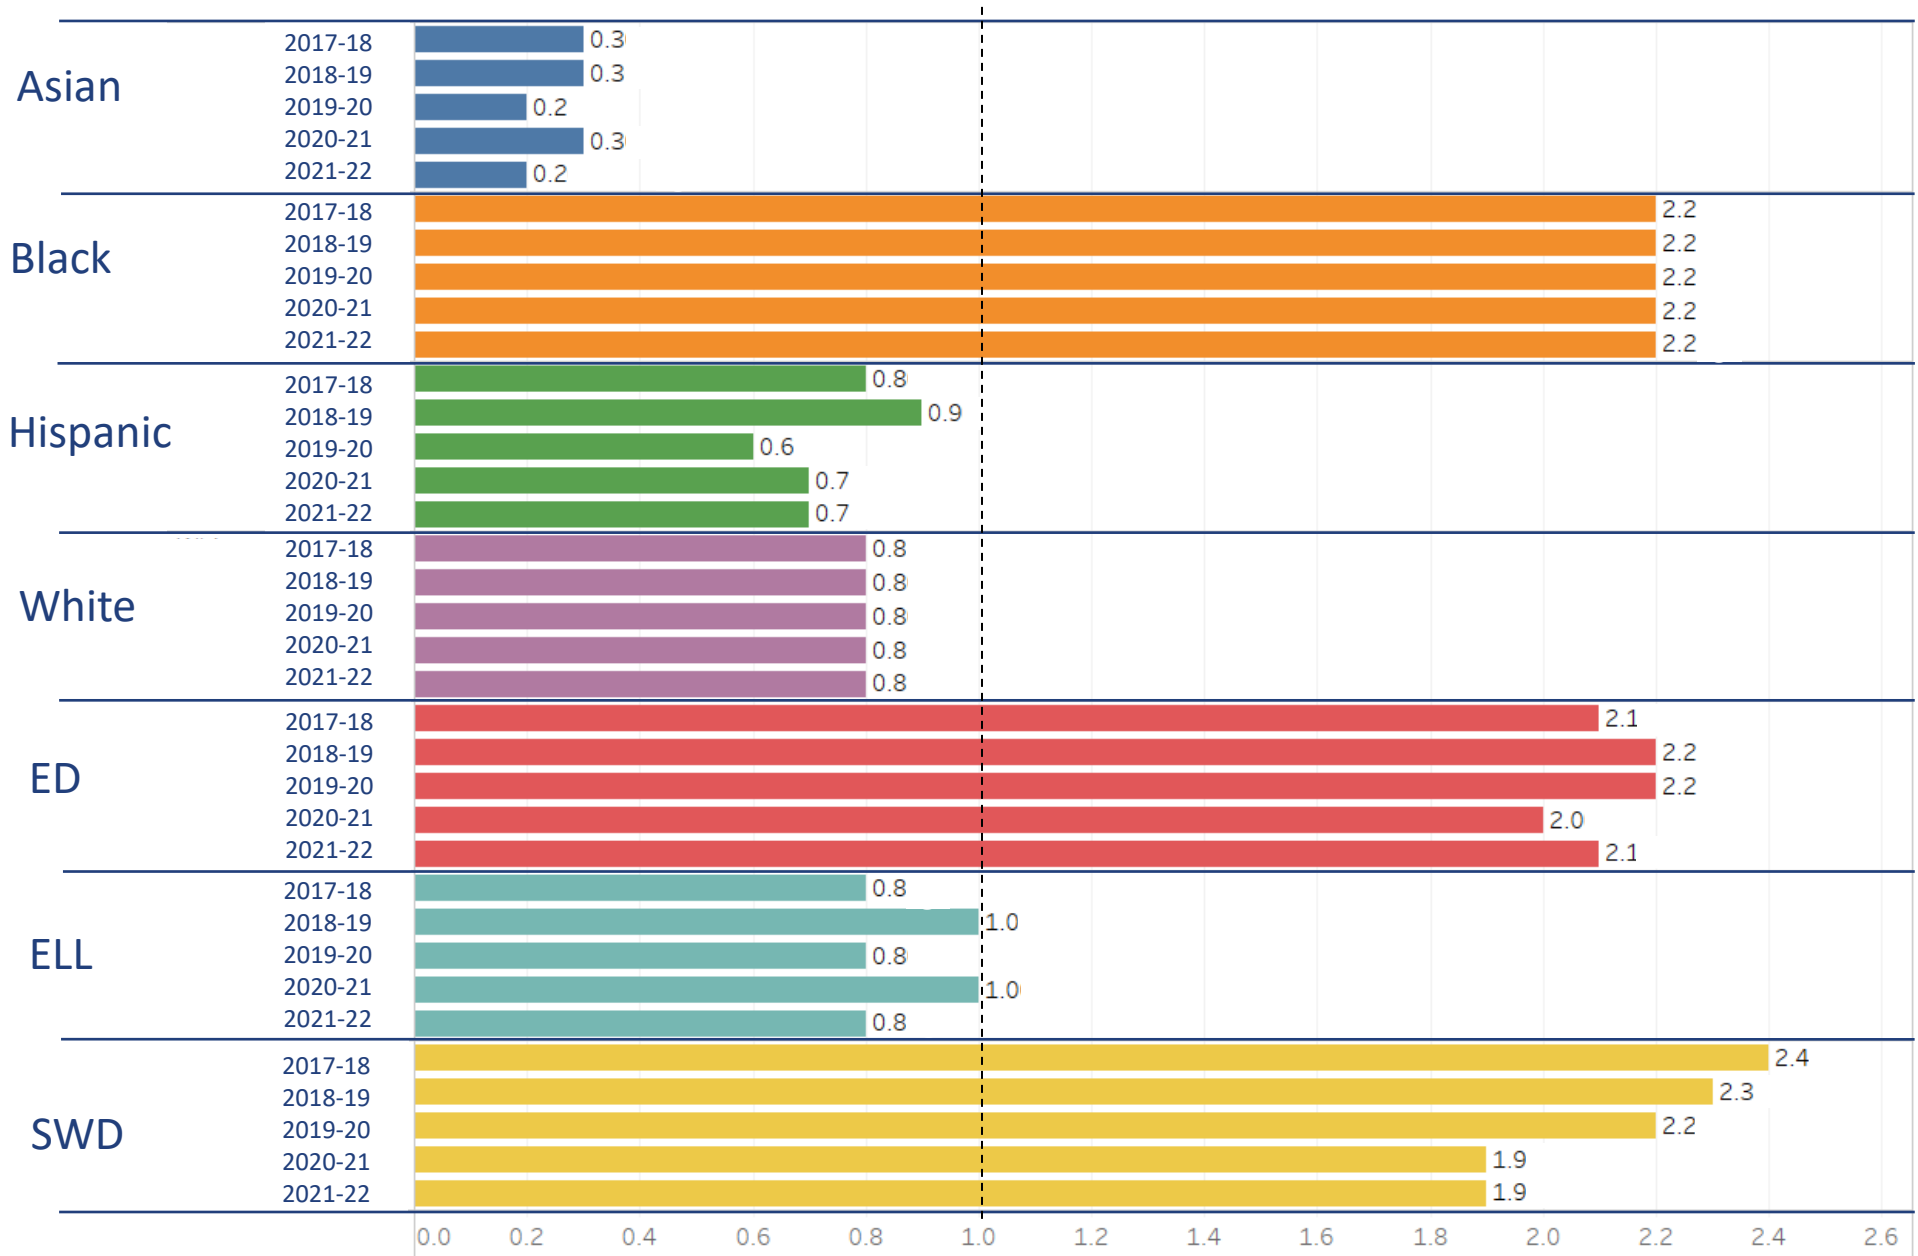

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

OSS Risk Ratio / Middle School

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

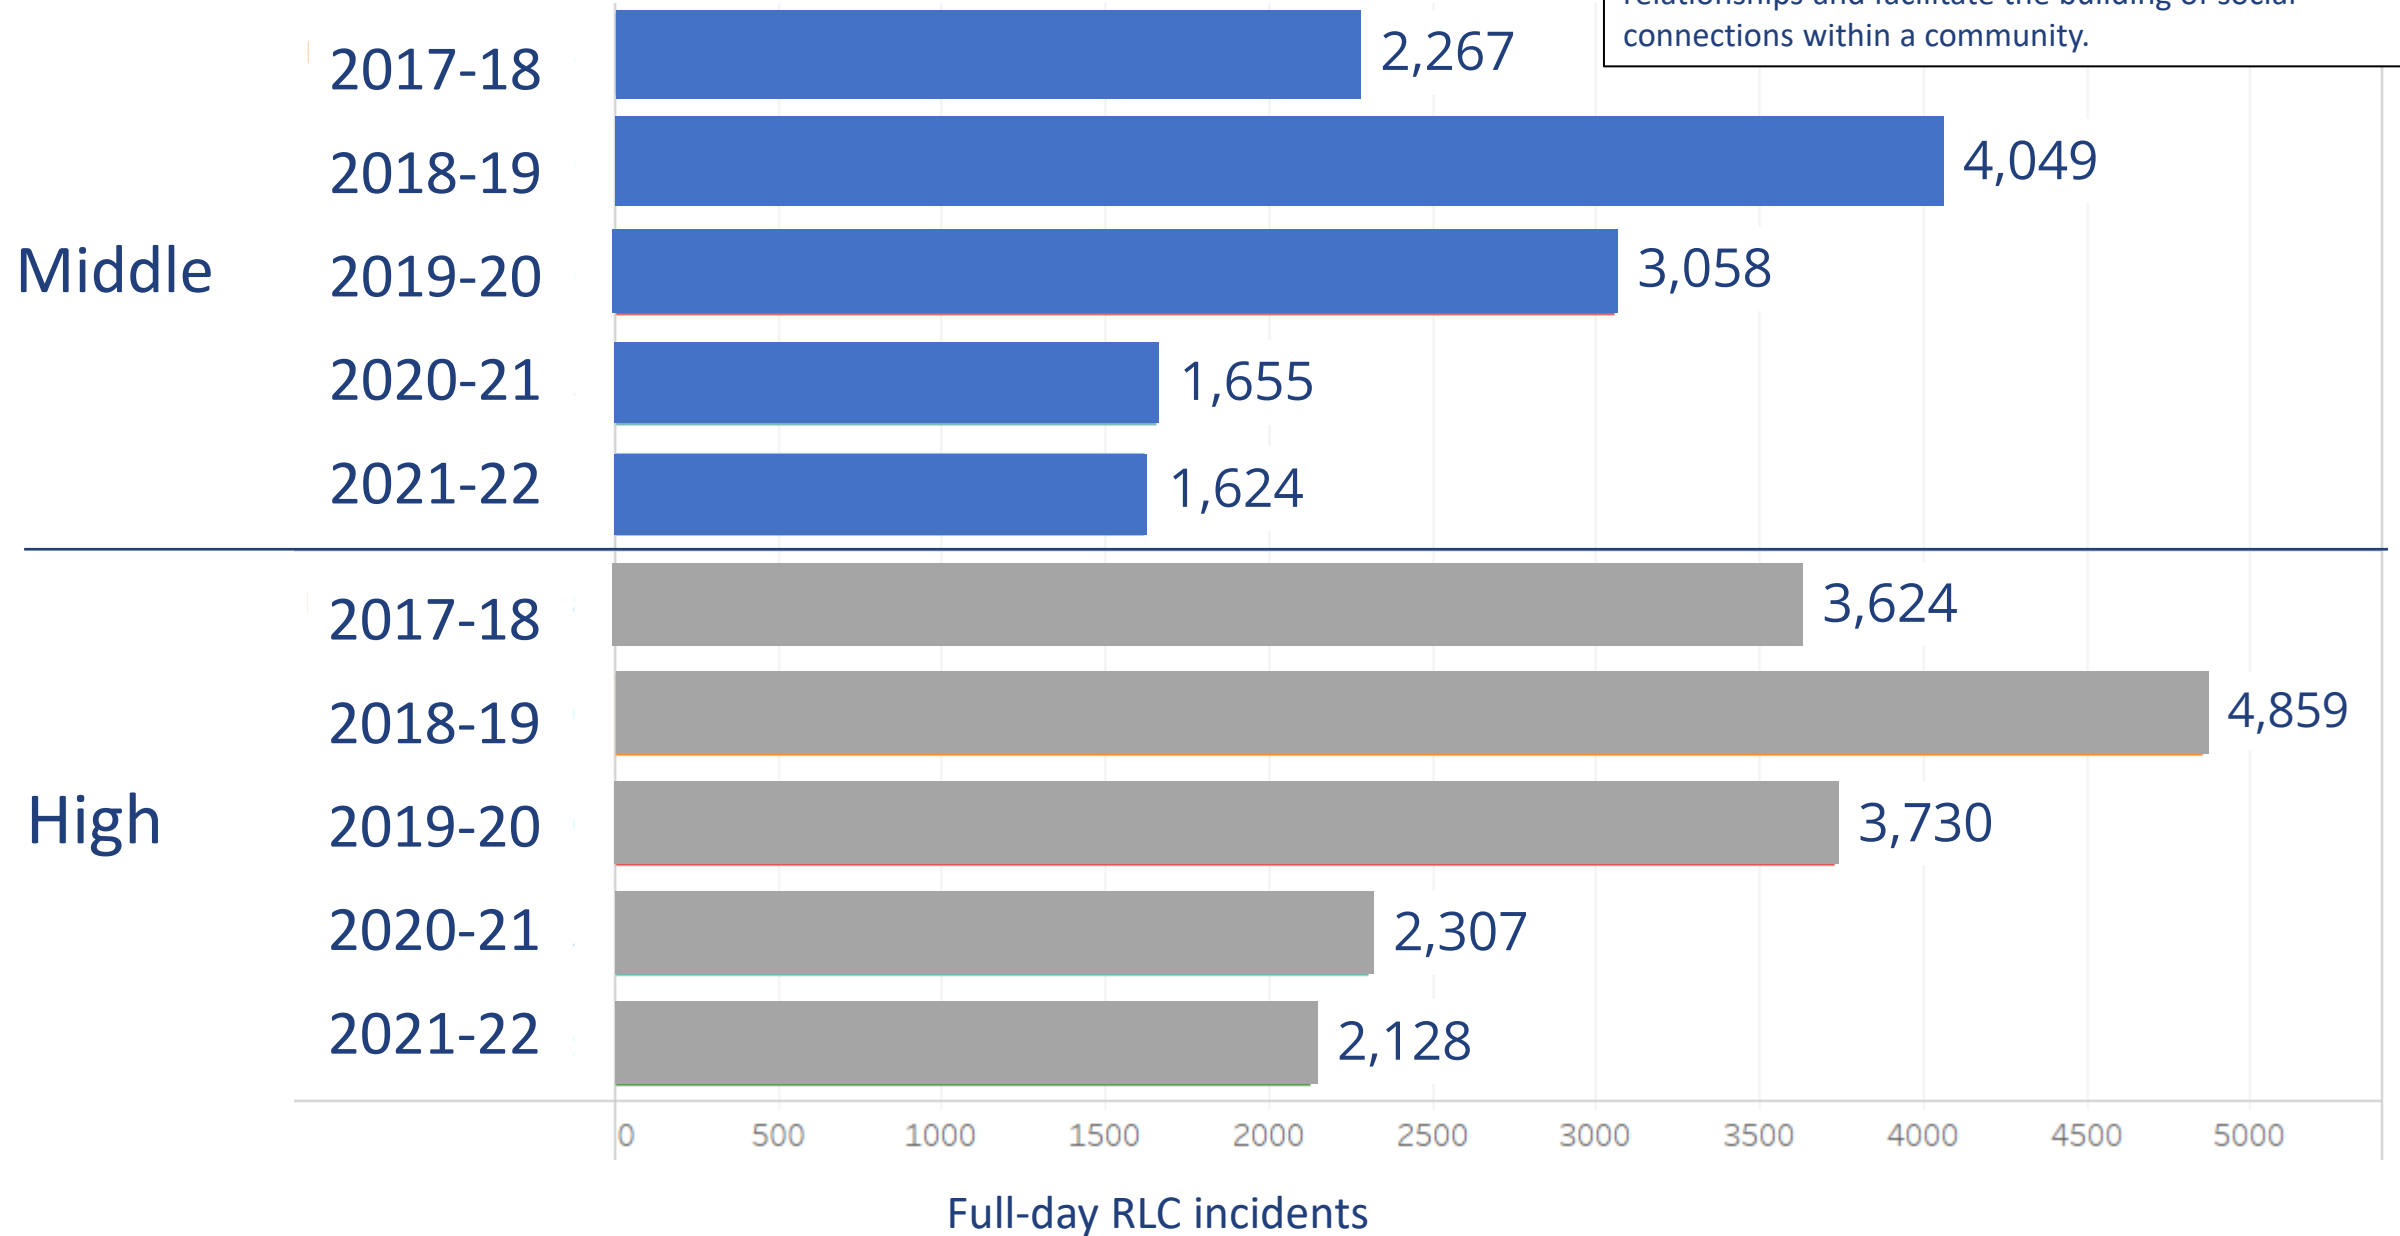

OSS Risk Ratio / High School

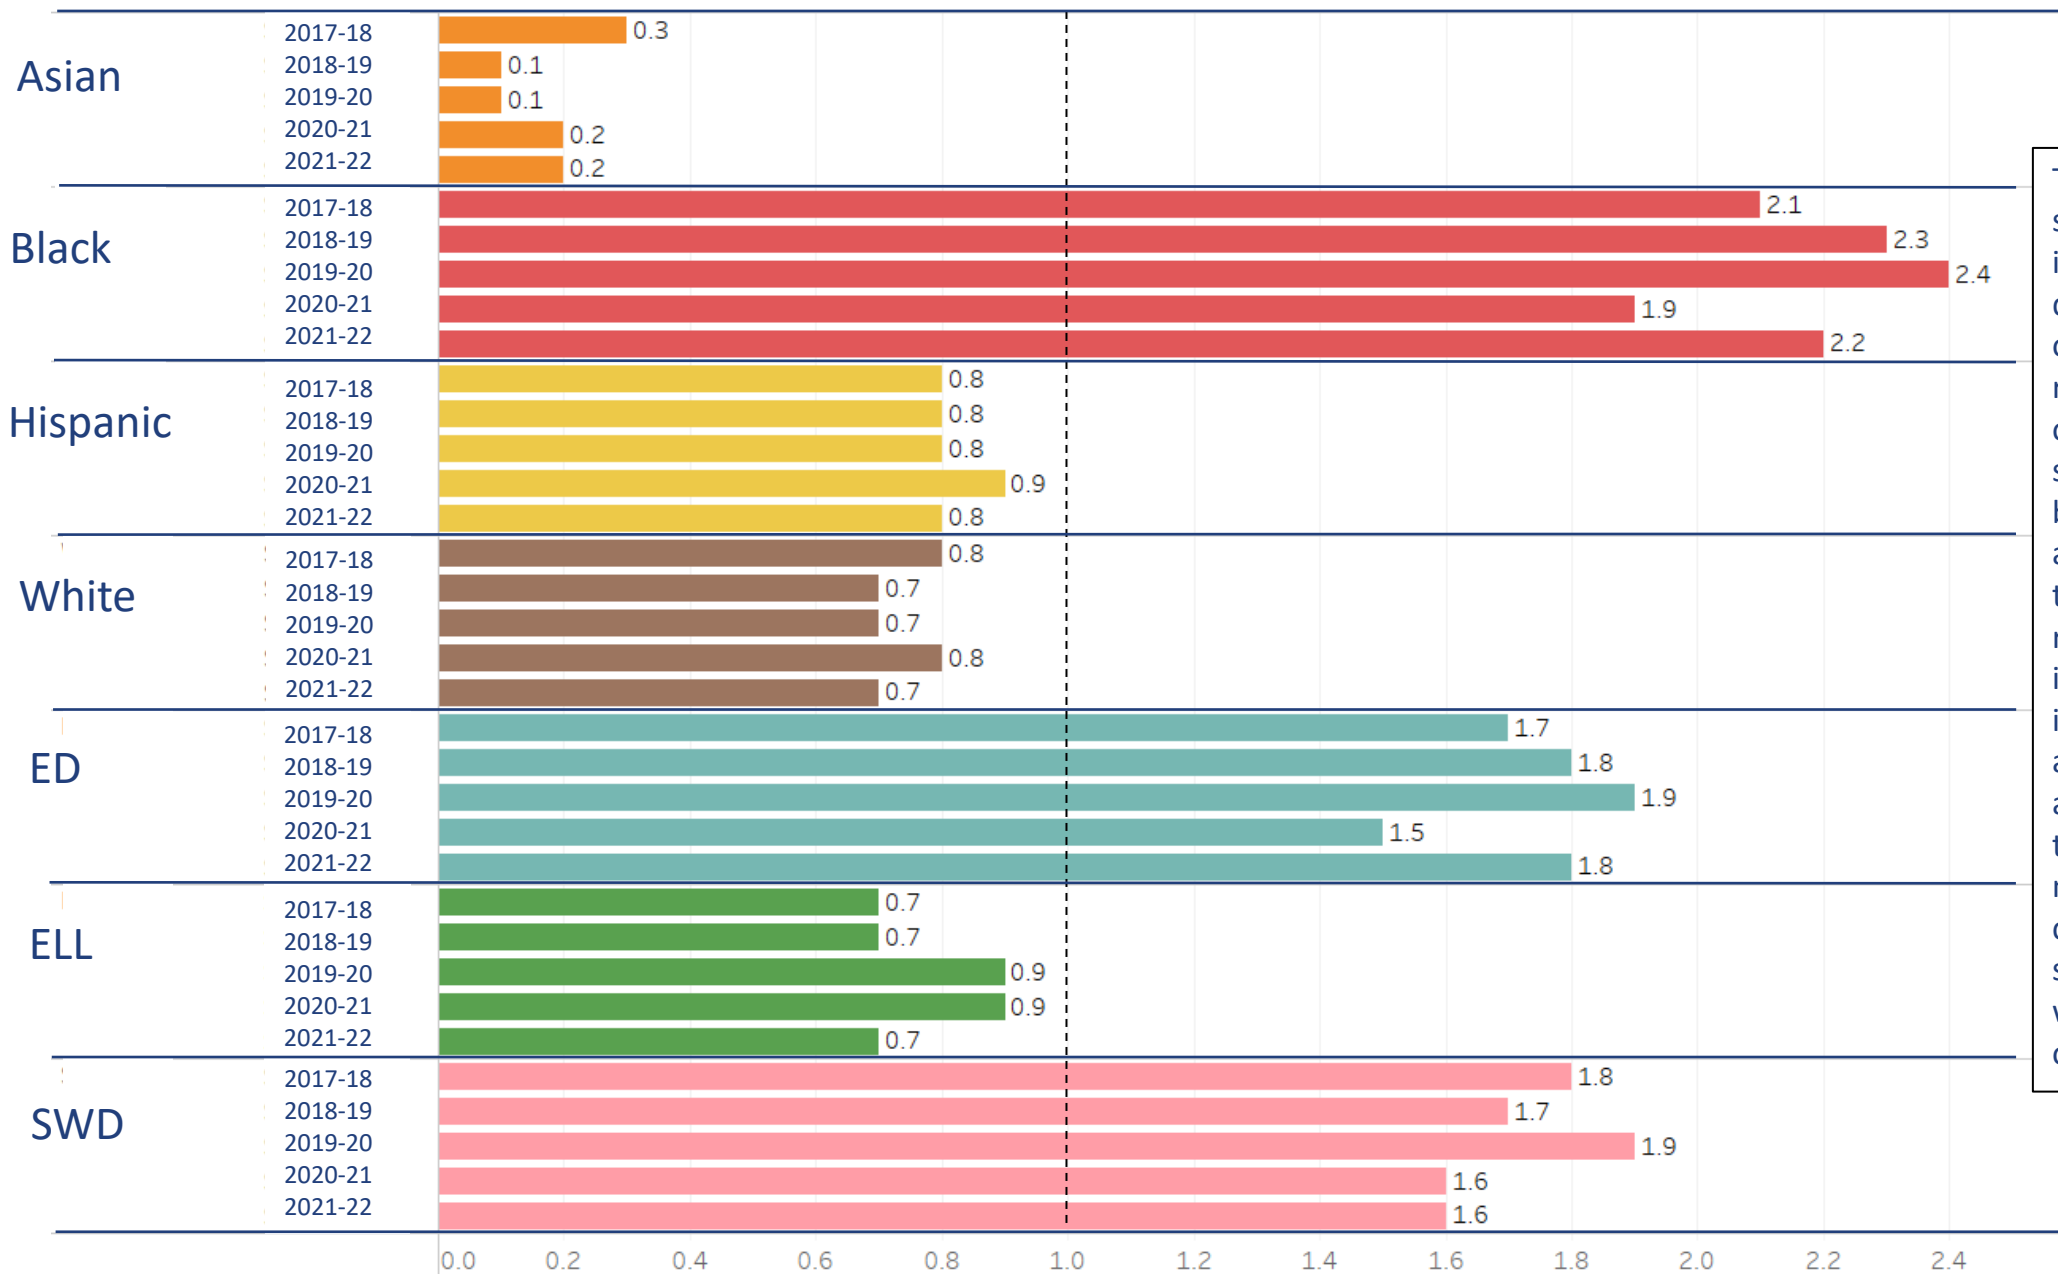

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

Restorative Learning Center (RLC) Incidents

A Restorative Learning Center is a classroom focused on teaching skills to repair damage, strengthen relationships and facilitate the building of social connections within a community.

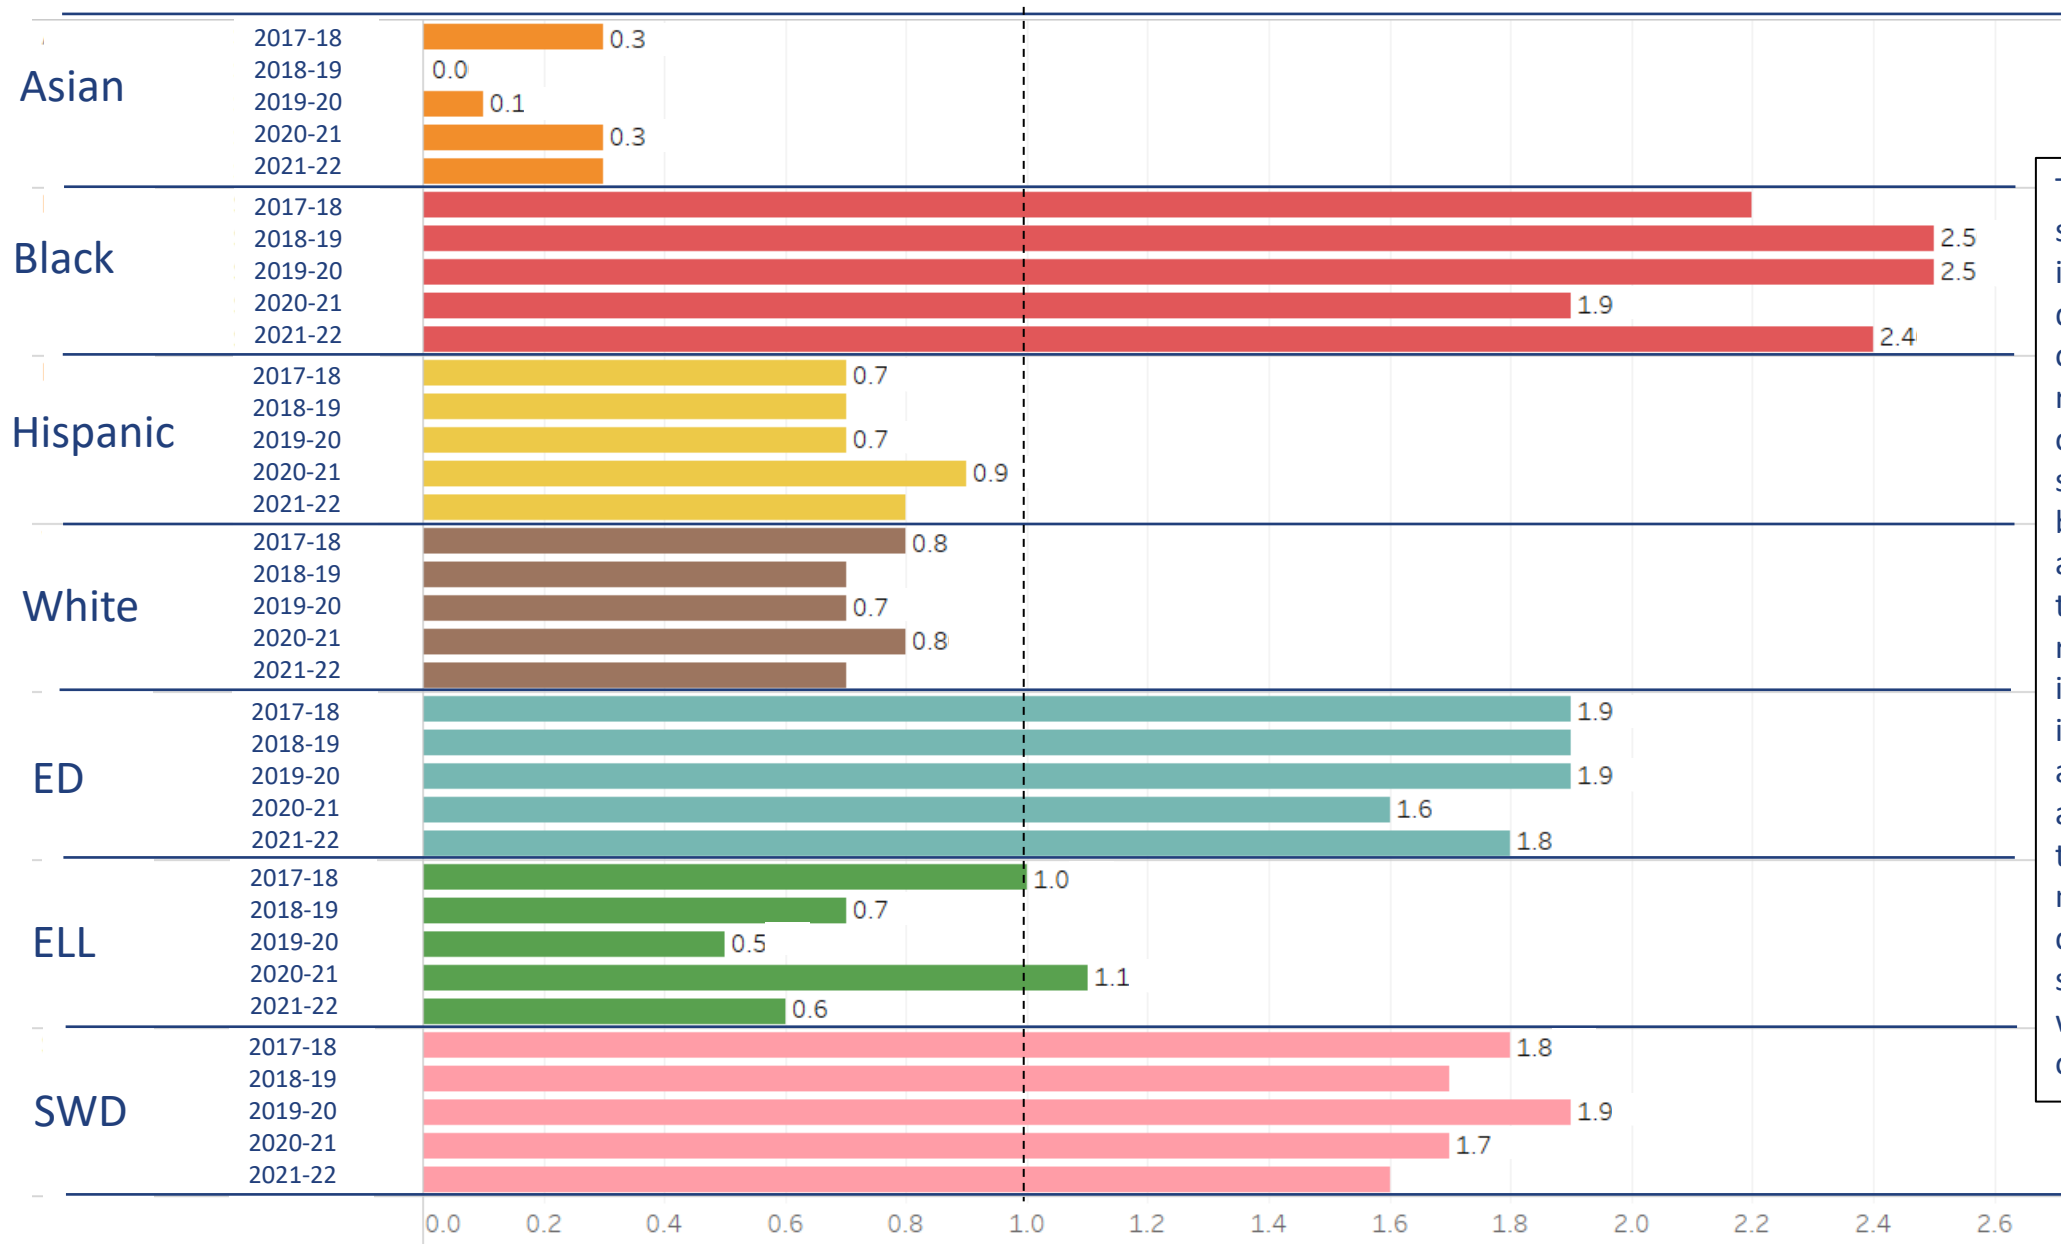

Overall RLC Risk Ratio / All Grades

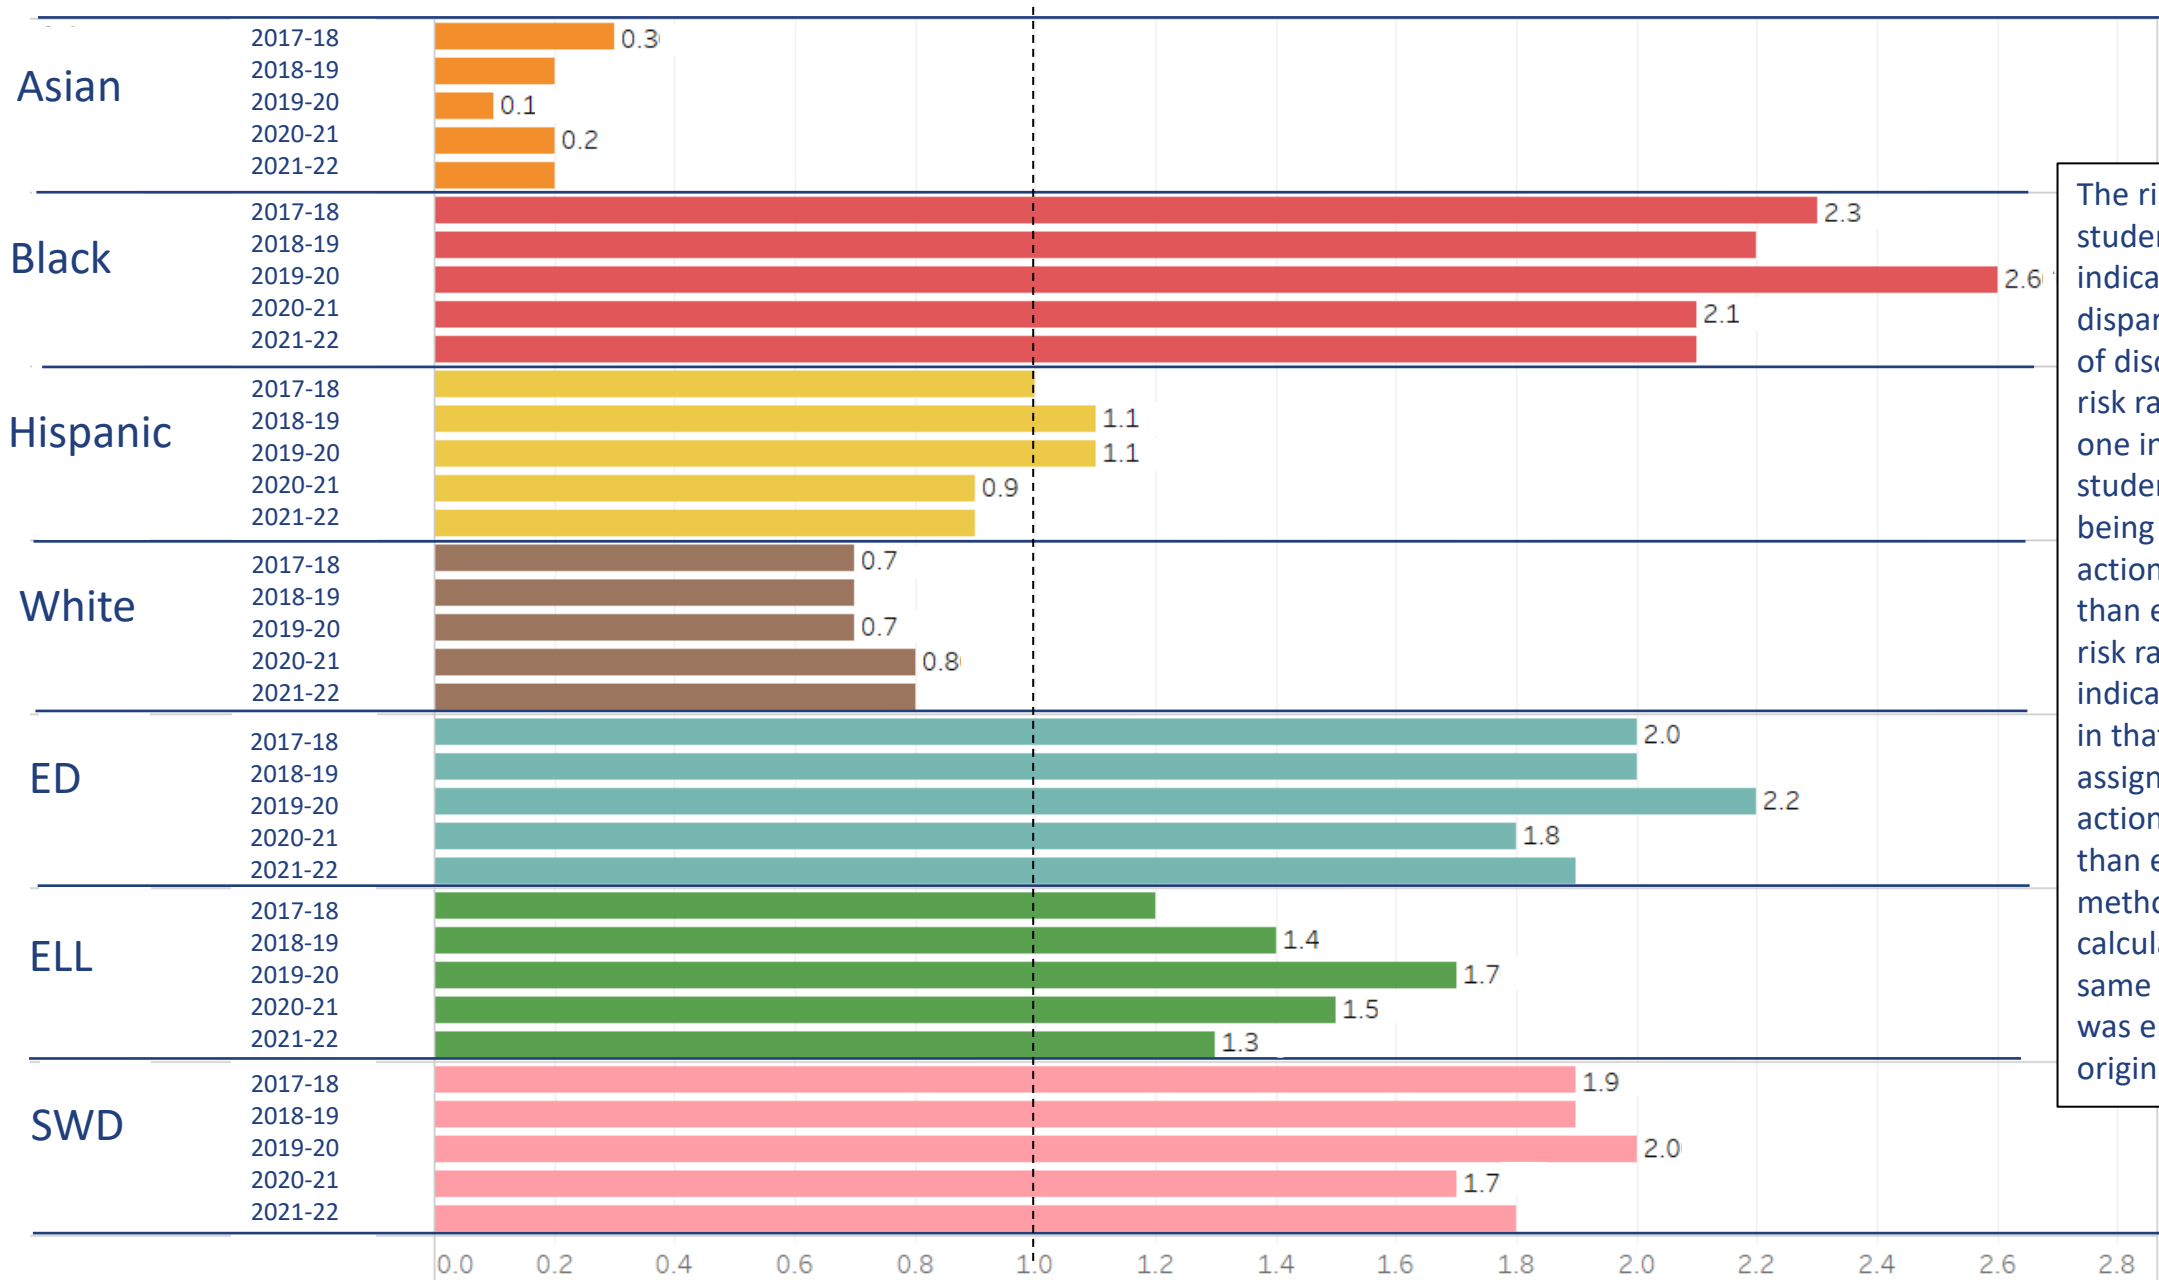

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

RLC Risk Ratio / Middle School

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.

RLC Risk Ratio / High School

The risk ratio for each student group is an indication of parity / disparity in the assignment of disciplinary actions. A risk ratio of greater than one indicates that the students in that group are being assigned disciplinary actions at a higher rate than expected. Likewise, a risk ratio of less than one indicates that the students in that group are being assigned disciplinary actions at a lower rate than expected. The methodology used to calculate these ratios is the same methodology that was employed in the original DEO report.
