

## SuccessNet Add Products

Welcome to my Pearson Training. Let's learn how to add products to your Pearson SuccessNet® account.

When you log in to Pearson SuccessNet® for the first time, you will need to add products to your account.

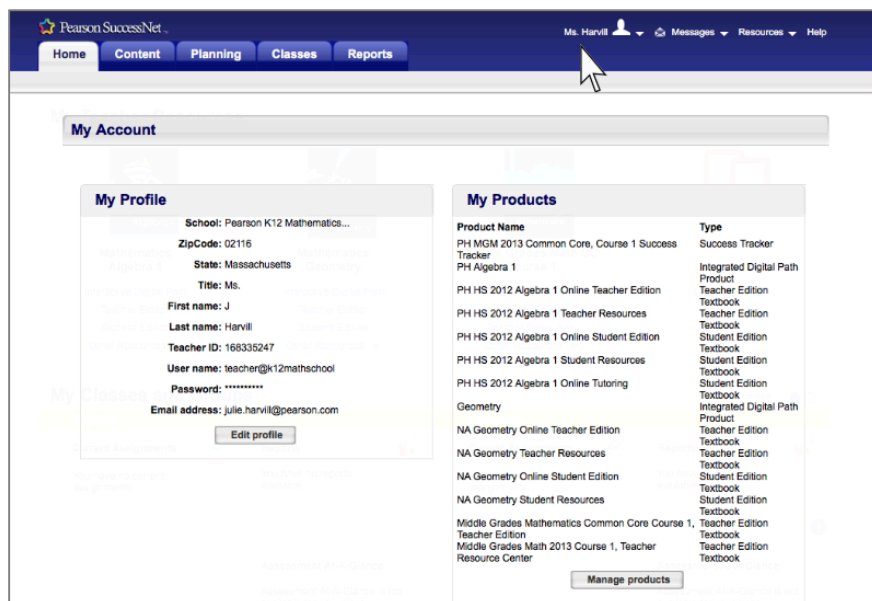

To add products to your account, click **Add Products**, and select the products from the list that appears in the Manage Products window.

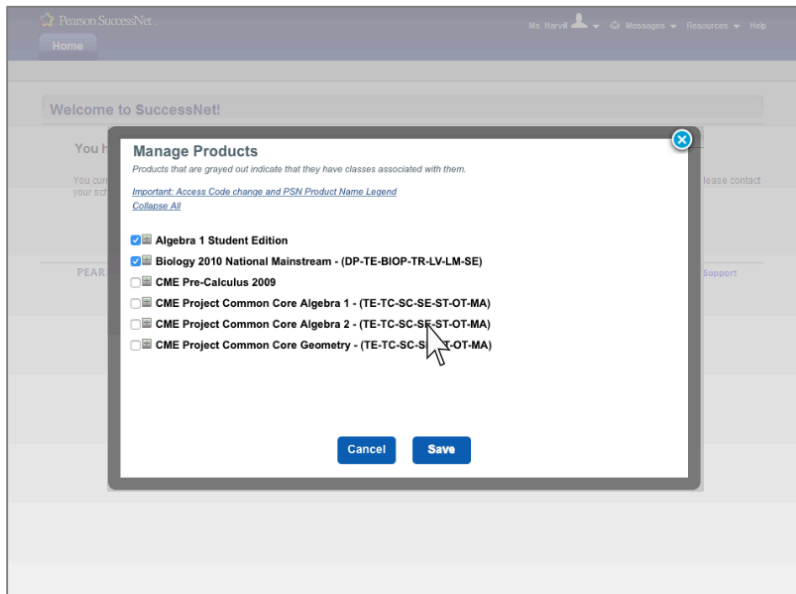

Now click **Save**.

When your school or district purchases additional digital products, you can add them to your account. Click the down arrow next to your name at the top of the teacher Home page and select **My Account**.

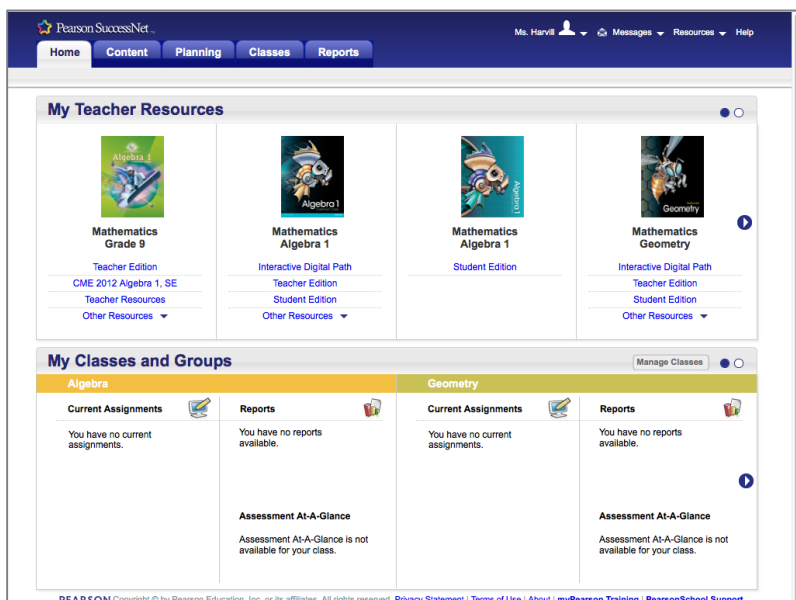

On the My Account page, you'll see two columns: My Profile and My Products. Click **Manage Products**, and then click **Manage Products** again.

The Manage Products window displays a list of products that your school or district is licensed to use. Products with a check mark have already been added to your account. If the checked products are greyed out, they have been associated with a class. To add products to your account, click the box next to the product names and click **Save**.

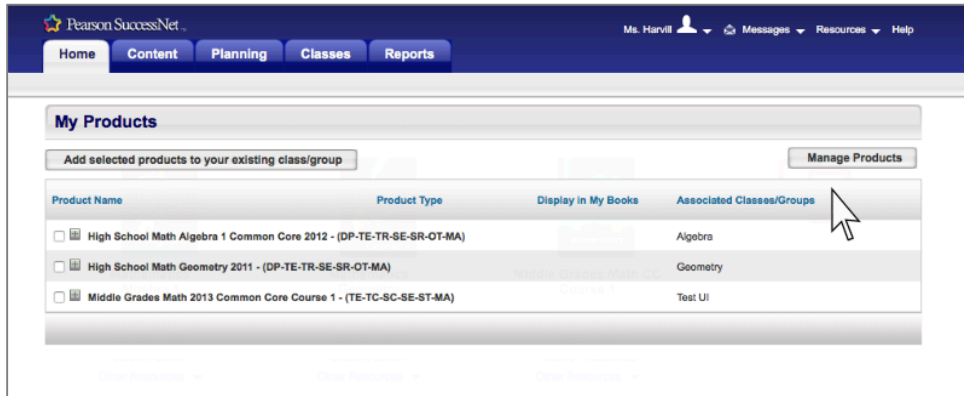

When you add products to your account, they automatically show up on your teacher Home page; however, there might be some occasions when you don't want them to appear on your Home page. To control the settings for hiding and showing the products on your Home page, use the drop-down menu next to your name and select **My Account**.

From the My Account page, select **Manage Products**.

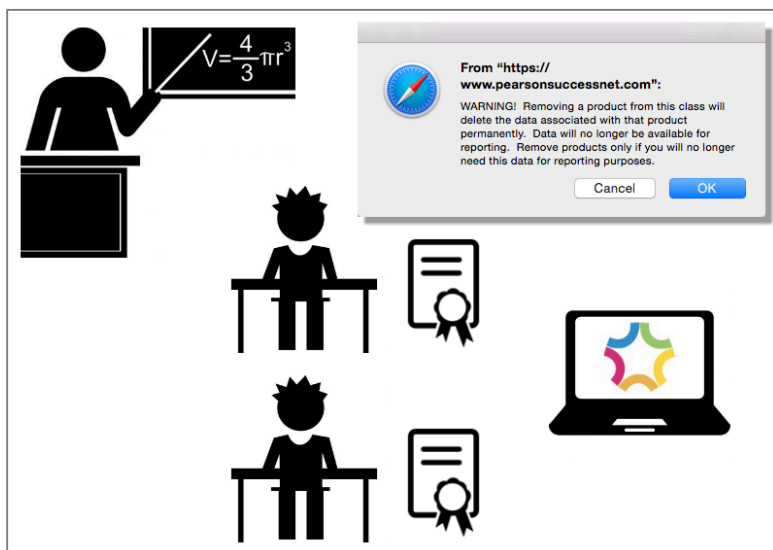

To add product components to one or more classes and groups, click the boxes next to the component names and then click **Add selected products to your class/group**.

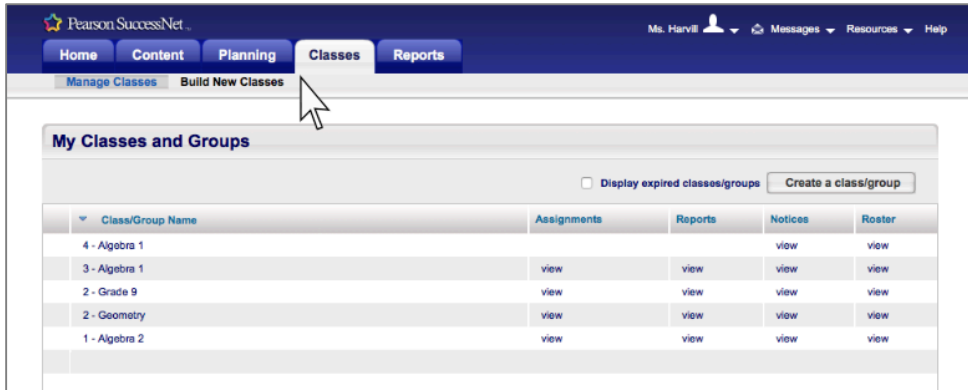

When you enroll students into a class, each student consumes one license subscription for each product associated with the class. Once students are enrolled, they can access the program content when they sign in to Pearson SuccessNet®.

You can only remove products from your account that are not associated with a class. If you want to remove products from your account that are associated with a class, you must either delete the class or change the product components associated with the class.

\* Note that deleting product components or deleting the class removes all student progress data that is associated with the product.

To change product components associated with a class, click the **Classes** tab, then click the class name.

Deselect the product components by clicking the checkmarks to remove them from each box. Now select the product components you want to associate with the class and click **Save**.
